(54) **Method and apparatus for location detection**

(57) A location calculation method for calculating, by using propagation delay time of signals received from wireless transmitters (21 - 23), a location of a reception point of the signals to thereby reduce errors in the distance measurement due to an erroneous detection of a path of a received signal includes first step (S101) of measuring reception timing of signals received from the wireless transmitters, second step (S102) of estimating, according to results of measurement of the reception timing obtained by the first step, an erroneous result of measurement, and third step (S103) of removing the results of measurement estimated as the erroneous results by the second step from the results of measurement of the reception timing obtained by the first step, and thereby calculating the location of the reception point.

European Patent  
Office

Application Number

EP 02 00 0244

#### CLAIMS INCURRING FEES

The present European patent application comprised at the time of filing more than ten claims.

- ☐ Only part of the claims have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claim(s):
- ☐ No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.

#### LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

see sheet B

- ☐ All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
- ☐ As all searchable claims could be searched without effort justifying an additional fee, the Search Division did not invite payment of any additional fee.
- ☒ Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respect of which search fees have been paid, namely claims:  
1-3, 7-9, 11-17
- ☐ None of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims, namely claims:

European Patent  
OfficeLACK OF UNITY OF INVENTION  
SHEET BApplication Number  
EP 02 00 0244

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

## 1. claims: 1,2,11-17

A method for location calculation based on the propagation delay of signals comprising the steps of estimating the erroneous measurement results and removing the erroneous results from the position calculation, whereas, the erroneous result is estimated based on a comparison between an S/N ratio of the received signal and a predetermined threshold value; and the corresponding apparatus, software program and control apparatus.

---

## 2. claims: 3,7-9

A method for location calculation based on the propagation delay of signals comprising the steps of estimating the erroneous measurement results and removing the erroneous results from the position calculation, whereas, the erroneous result is estimated based on the determination of geometrical relationships between the reception point, a standard wireless transmitter and a wireless transmitter which is used as an object of the estimation.

---

## 3. claims: 4-6

A method for location calculation based on the propagation delay of signals comprising the steps of estimating the erroneous measurement results and removing the erroneous results from the position calculation, whereas, the erroneous result is estimated based on the comparison of measurement results of S/N ratios or distances regarding each sector of one wireless facility.

---

## 4. claim: 10

A method for location calculation based on the propagation delay of signals comprising the steps of estimating the erroneous measurement results and removing the erroneous results from the position calculation, whereas, the erroneous result is estimated based on the likelihood of estimated location.

---

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 02 00 0244

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
